FOR LAW FIRMS

New Websites for Lawyers.

Tech is no longer the barrier. Today, your firm is limited only by its own imagination.

Welcome

Why this guide exists

00

There Has Never Been a Better Time

For decades, a truly ambitious law firm website meant enterprise budgets: multilingual editions, deep integrations with your practice systems, client portals, custom tools. That era is over. The technology that used to be the barrier is now the easy part.

Today a website can be far more than a brochure. It can qualify and intake new clients while you sleep, speak to clients in their own language, book consultations straight into your calendar, feed your case-management system, and report on exactly which work brings the best clients through the door.

"Tech is no longer the barrier. We are now limited only by our own imaginations."

WHO THIS IS FOR

Managing and marketing partners at law firms of any size — from sole practitioners to multi-office practices — who suspect their website could be working much harder for the firm.

What's Inside

01	The Opportunity	Why law firm websites are due an upgrade
02	Multilingual by Design	Serve clients in every language they think in
03	SEO Baked Into Every Detail	Be found for the work you want more of
04	Integrated With Your Firm	Your website and business systems, connected
05	Bespoke Development & APIs	Portals, intake, payments, e-signatures
06	Custom Software & AI	Incremento Labs — beyond the website
07	Analytics & Dashboards	Know exactly what your website earns you
08	What a Project Looks Like	Process, timeline and what to expect
09	Working With Incremento	Two divisions, one accountable partner

The Opportunity

Why law firm websites are due an upgrade

01

Most law firm websites were built as static brochures: a homepage, a list of practice areas, lawyer bios, a contact form. Useful in 2015. In 2026, your prospective clients expect more — and so should you.

What changed

- **Clients research before they call.** The firm that answers their question online wins the consultation.
- **Search is where firms are chosen.** For most practice areas, Google is the new referral network.
- **Cross-border clients are the norm** — expats, investors, international business. They search in their own language.
- **Build costs collapsed.** Capabilities that cost six figures five years ago — portals, integrations, multilingual sites — are now within every firm's reach.

The firms that treat their website as infrastructure — not stationery — are pulling ahead, quietly and measurably. The gap compounds every month.

THE BOTTOM LINE

A modern law firm website is a revenue system: it attracts the right enquiries, qualifies them, books them, and reports on them. Everything in this guide serves that goal.

Multilingual by Design

Serve clients in every language they think in

02

Legal services are bought in moments of stress and consequence. People in those moments choose the firm that speaks their language — literally. A multilingual site is not a translation exercise; it is a market-expansion strategy.

Done properly, multilingual means

- **Native-quality content** in each language — written for the legal context, not machine-translated word-by-word.
- **Language-specific SEO** — each language edition indexed and ranking in its own right, with correct hreflang signals to Google.
- **Localised enquiry handling** — forms, confirmations and follow-up emails in the client's language.
- **Easy maintenance** — update content once, and the structure keeps every edition in sync.

For a firm in Portugal, an English + Portuguese site is the obvious baseline — and French, German or Mandarin editions can target golden-visa, property and relocation clients with remarkable precision. Each language is a separate doorway into the firm.

Checklist

- ☐ Which languages do your best clients actually think in?
- ☐ Which practice areas attract international clients?
- ☐ Who will review legal terminology in each language?

SEO Baked Into Every Detail

Be found for the work you want more of

03

SEO is not a plugin you switch on at the end. On a well-built site, it is in the foundations: the architecture, the markup, the speed, the content plan. That is what "baked in" means — and it is why our sites rank.

What baked-in looks like

- **A page for every practice area and location** — each one a landing page engineered to rank for the searches that matter to it.
- **Legal-specific structured data** — LegalService, Attorney and FAQ schema so Google understands exactly who you are and shows rich results.
- **Local SEO** — Google Business Profile alignment, location pages and citations, so you own the map results in your city.
- **Core Web Vitals as a feature** — speed is a ranking factor and a first impression. Our sites load in under a second.
- **Content engine** — a publishing structure for articles and guides that answer real client questions and compound authority over time.

WHY IT COMPOUNDS

Paid ads stop the moment you stop paying. Rankings earned by a technically sound site with genuinely useful content keep working — every article published is an asset the firm owns.

Integrated With Your Firm

Your website and business systems, connected

04

A website that ends at the contact form pushes the real work back onto your inbox. A connected website carries the enquiry all the way into the systems your firm already runs on.

What we connect

- **Practice & case management** — new enquiries arrive as structured intake records, not emails to retype.
- **Calendars & consultation booking** — clients book directly into available slots; reminders are automatic; no-shows drop.
- **CRM & email** — every contact captured, tagged by practice area, and nurtured with appropriate follow-up.
- **Document workflows** — engagement letters and intake questionnaires issued and returned digitally, with e-signature.
- **Billing & payments** — take consultation fees or retainers online, reconciled against your records.

Every integration removes a piece of manual administration. Multiply that across every enquiry, every week, and the time savings alone justify the build — before counting a single extra client won.

Bespoke Development & APIs

Built for how your firm actually works

05

Off-the-shelf templates force your firm into someone else's shape. Bespoke development starts from your processes and builds the site around them. With modern APIs, almost any system your firm touches can be part of the picture.

Examples of what's possible

- **Secure client portals** — clients log in to see case status, share documents and message the team, instead of calling for updates.
- **Smart intake** — dynamic questionnaires that adapt to the matter type and arrive pre-qualified, conflict-checked and routed to the right lawyer.
- **Fee calculators & instant quotes** — for standardised work (conveyancing, incorporation, visas), let clients self-serve an estimate.
- **API integrations** — registries, court-data services, ID-verification, translation services, payment providers: if it has an API, we can connect it.
- **Anything you can describe** — genuinely. The constraint today is imagination, not technology.

OWNED, NOT RENTED

Everything we build is yours: code, content, data, accounts. No platform lock-in, no licence fees that creep up, no agency hostage situations.

Custom Software & AI

Incremento Labs — beyond the website

06

The website is often just the visible tip. Through Incremento Labs — our custom software & AI consultancy — we build the systems behind it that transform how a firm operates.

Where AI is already earning its keep in firms

- **Enquiry triage** — AI reads each new enquiry, classifies the matter, flags urgency and conflicts, and drafts a first response for review.
- **Document intelligence** — extract key terms and dates from contracts and correspondence into structured, searchable records.
- **Knowledge assistants** — internal tools that answer questions from your own precedents and know-how, securely.
- **Workflow automation** — the repetitive admin between systems handled by software, with humans approving, not retyping.

We are pragmatists: we recommend AI where it measurably saves time or wins work, and we will tell you plainly where it does not. Confidentiality and data control are designed in from the first conversation.

Analytics & Dashboards

Know exactly what your website earns you

07

Most firms cannot answer a simple question: which marketing brings in the clients worth having? A properly instrumented website answers it continuously. Analytics, reporting and dashboards are included in every build — not an upsell.

Included as standard

- **Full analytics setup** — GA4 and Search Console configured correctly, with enquiry and booking conversions tracked end to end.
- **Lead-source attribution** — see whether each enquiry came from search, referral, social or a specific article, by practice area.
- **Live dashboards** — a clear view for partners: enquiries this month, top-performing pages, language split, conversion rates. No logins into five tools.
- **Plain-English reporting** — periodic summaries that tell you what happened, why, and what we recommend next.

DECISIONS, NOT DATA

The point is not charts — it is confident decisions: which practice areas to push, which content earns clients, where the next marketing euro should go.

What a Project Looks Like

Process, timeline and what to expect

08

A typical law firm website project runs four to ten weeks depending on scope. You will always know where things stand.

The four stages

- **1 · Discovery** — goals, practice areas, audiences, languages, systems to integrate. Output: an agreed scope and site architecture.
- **2 · Design** — the look and feel of the firm, designed for trust and conversion. Two revision rounds included.
- **3 · Build** — development, integrations, content load, multilingual editions, SEO implementation, analytics and dashboards.
- **4 · Launch & beyond** — DNS, redirects, monitoring, training. Thirty days of post-launch support, then an optional growth retainer.

What we need from you

- ☐ A decision-maker who can give feedback within a few days
- ☐ Input on practice-area content from the relevant lawyers
- ☐ Access to the systems we are integrating (or the person who has it)
- ☐ Photography — or a morning with the photographer we arrange

Working With Incremento

Two divisions, one accountable partner

09

Incremento is a Lisbon digital studio in two parts. **Incremento Studio** handles web design and digital marketing — the site, the SEO, the content, the campaigns. **Incremento Labs** handles custom software and AI consultancy — portals, integrations, automation, intelligent tools.

For a law firm, that combination matters: the same team that designs your public face can build the systems behind it, with no hand-offs between agencies and no gaps in accountability.

Why firms choose us

- **Senior people only** — you talk to the people doing the work.
- **Everything owned by you** — code, content, accounts, data.
- **Measured, not vibes** — every engagement reports against agreed numbers.
- **Built to compound** — sites and systems designed to keep gaining value, not decay.

Start the Conversation

The first step is a free, no-obligation strategy call: thirty minutes on your firm, your goals and what a website could realistically do for you. If we are not the right fit, we will say so and point you somewhere better.
